Abstract

This contribution crosschecks the results of JVET-AM0067 (Non-EE2: Enhanced CCP merge mode with BVG-CCCM model). Partial BD-rate and run-times match those reported by the proponents.

Introduction

JVET-AM0067 proposes to store the parameters of the BVG-CCCM coded block for coding of subsequent chroma intra and inter blocks. If the current block is coded by the BVG-CCCM mode, the CCP model type and parameters will be stored and inherited for the following coding of subsequent chroma intra and inter blocks.

Experimental result

The detailed results are provided in the excel sheets.
